DETAILED ACTION

Newly submitted claims 11-21 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons:

The originally claims 2-10, draw to a structural alternator apparatus. Particularly the independent claim 2 recites the structure of the alternator with a rotor and a stator. The original claimed language incorporated method of making recitations, which have been considered as product-by-process claimed invention.

Claims 11-21 are drawn to method of manufacturing the stator of an alternator. The method of making a stator is classified in class 29 subclass 596.

Furthermore, the original claim 2 recites "a method of manufacturing the **alternator**", i.e., an alternator having both recited rotor structure and stator structure, while the recently added claims recite "a method of manufacturing **a stator** of an alternator", i.e., the newly added claims now specifically focus on only the method of forming the stator.

Thus, these newly added claims are independent and distinct from the invention originally claimed.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 11-21 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.
